

Docket No.: IA 1508.01A US
USSN: 09/295,826

PATENT
Art Unit: 3621

This listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

Claim 1 (currently amended): A method for permitting selective access to data ~~based on an identifier stored on an electronic storage medium, comprising the steps of:~~

- (a) reading the identifier burst cut area (BCA) information stored on an of the electronic storage medium;
- (b) combining a ~~logic~~ user information from a server database with the identifier BCA information to trigger a transaction for a payment, ~~wherein the logic is information used to report back to an entity;~~
- (c) verifying the identifier BCA information in a separate database; and
- (d) collecting the payment for use of content on the electronic storage medium.

01
Claim 2 (currently amended): The method as recited in claim 1, wherein the identifier BCA information is verified in the separate database after ~~the~~ a user effects a remote link between the a computer and the separate database.

Claim 3 (currently amended): The method as recited in claim 1, wherein the BCA information is read by using a logic that the logic tailors video based information.

Claim 4 (currently amended): The method as recited in claim 1, further comprising ~~the step of~~ storing a record of the transaction in a database.

Claim 5 (currently amended): The method as recited in claim [1] 2, wherein the computer is remotely coupled to the separate database via a network.

Docket No.: IA 1508.01A US
USSN: 09/295,826

PATENT
Art Unit: 3621

Claim 6 (previously presented): The method as recited in claim 5, wherein the payment processing is conducted electronically in a secure manner.

Claim 7 (previously presented): The method as recited in claim 5, wherein an electronic code is utilized to authorize use of the content on the electronic storage medium.

Claim 8 (previously presented): The method as recited in claim 1, wherein the electronic storage medium is an optical disc.

Claim 9 (currently amended): The method as recited in claim 8, wherein the ~~identifier is stored on a burst cut area~~ information is an identifier of the optical disc.

Claim 10 (previously presented): The method as recited in claim 1, wherein the data is stored in a remote database.

01 Claim 11 (currently amended): A computer program embodied on a computer readable medium for permitting selective access to data ~~based on an identifier stored on an electronic storage medium~~, comprising:

(a) a code segment that reads Burst Cut Area (BCA) information stored on an ~~the identifier of the~~ electronic storage medium;

(b) a code segment that combines a ~~logic~~ user information from a server database with the ~~identifier~~ BCA information to trigger a transaction for a payment; ~~wherein the logic is information used to report back to an entity;~~

(c) a code segment that verifies the ~~identifier~~ BCA information in a separate database; and

(d) a code segment that collects the payment for use of content on the electronic storage medium.

PATENT
Art Unit: 3621

Claim 12 (currently amended): The computer program as recited in claim 11, wherein the ~~identifier~~ BCA information is verified in the separate database after the user effects a remote link between the a computer and the database.

Claim 13 (currently amended): The computer program as recited in claim 11, wherein the BCA information is read by using a logic that ~~the logic~~ tailors video based information.

Claim 14 (previously presented): The computer program as recited in claim 11, and further comprising a code segment that stores a record of the transaction on a database.

Claim 15 (currently amended): The computer program as recited in claim [11] 12, wherein the computer is remotely coupled to the separate database via a network.

9 1
Claim 16 (previously presented): The computer program as recited in claim 15, wherein the payment processing is conducted electronically in a secure manner.

Claim 17 (previously presented): The computer program as recited in claim 15, wherein an electronic code is utilized to authorize use of the content on the electronic storage medium.

Claim 18 (previously presented): The computer program as recited in claim 11, wherein the electronic storage medium is an optical disc.

Claim 19 (currently amended): The computer program as recited in claim 18, wherein the ~~identifier is stored on a burst cut area~~ information is an identifier of the optical disc.
